

Career Notes - 2024

I have become a strong advocate for async-first remote work. Working without constant meetings forces better documentation and clearer thinking, and in my experience it consistently outperforms co-located teams on deep technical projects.

This year I also spent a lot of time mentoring junior engineers. The biggest lesson was that code review feedback lands much better when it explains the why, not just the what.

Side Projects

Started building a personal knowledge base tool that ingests social media exports, PDFs, and images, and lets you chat with your own archived history using retrieval-augmented generation.

I have also been learning about vector databases and embeddings, and I am fascinated by how cheap it has become to build a real semantic search system without a large team.
